<b>9</b>	<b>3.14</b>	<b>4</b>

## **1 3.1**

Write an entity declaration for a memory circuit whose input and output ports are shown below. Use only the `std_logic` or `std_logic_vector` data types.

- `addr`: 12-bit address input
- `wra`: 1-bit write-enable control signal
- `oen`: 1-bit output-enable control signal
- `bit` bidirectional data bus

## 2 3.5

Assume that `a` is a 10-bit signal with the `std_logic_vector(9 downto 0)` data type. List the 10 bits assigned to the `a` signal.

- (a) `a <= (others=>'1');`
- (b) `a <= (1|3|5|7|9=>'1', others=>'0');`
- (c) `a <= (9|7|2=>'1', 6=>'0', 0=>'1' , 1|5|8=>'0', 3|4=>'0');`

## 3 3.6

Assume that `a` and `y` are 8-bit signals with the `std_logic_vector(7 downto 0)` data type. If the signals are interpreted as unsigned numbers, the following assignment statement performs `a / 8`. Explain.

```
y <= "000" & a (7 downto 3);
```

## 4 3.7

Assume the same `a` and `y` signals in Problem 3.6. We want to perform a `mod 8` and assign the result to `y`. Rewrite the previous signal assignment statement using only the `&` operator.

## 5 3.8

Assume that the following double-quoted strings are with the `std_logic_vector` data type. Determine whether the relational operation is syntactically correct. If yes, what is the result (i.e., `true` or `false`)?

- (a) `"0110" > "1001"`
- (b) `"0110" > "0001001"`
- (c) `2#1010# > "1010"`
- (d) `1010 > "1010"`

## 6 3.11

Determine whether the following signal assignment is syntactically correct. If not, use the proper conversion function and type casting to correct the problem.

---

```
1 library ieee;
2 use ieee.std_logic_1164.all;
3 use ieee.numeric_std.all;
4 ...
5 signal s1, s2, s3, s4, s5, s6, s7: std_logic_vector(3 downto
    0);
6 signal u1, u2, u3, u4, u5, u6, u7: unsigned(3 downto 0);
7 signal sg: signed(3 downto 0);
8 ...
9 u1 <= 2#0001#;
10 u2 <= u3 and u4;
11 u5 <= s1 + 1;
12 u6 <= u3 + u4 + 3;
13 u7 <= (others=>'1');
14 s2 <= s3 + s4 - 1;
15 s5 <= (others=>'1');
16 s6 <= u3 and u4;
17 sg <= u3 - 1;
18 s7 <= not sg;
```

---

## 7 3.12

For the following VHDL segment, correct the type mismatch with proper conversion function(s).

---

```
1 library ieee;
2 use ieee.std_logic_1164.all;
3 use ieee.numeric_std.all;
4 ...
5 signal src, dest: std_logic_vector(15 downto 0);
6 signal amount: std_logic_vector(3 downto 0);
7 ...
8 dest <= shift_left(src, amount);
```

---

## 8 3.13

For the following VHDL segment, correct the type mismatch with proper conversion function(s).

---

```
1 library ieee;
2 use ieee.std_logic_1164.all;
3 use ieee.numeric_std.all;
4 ...
5 signal src, dest: std_logic_vector(15 downto 0);
6 signal amount: std_logic_vector(3 downto 0);
7 ...
8 dest <= src sll amount;
```

---

## 9 3.14

For the following VHDL segment, correct the type mismatch with proper conversion function(s).

---

```
1 library ieee;
2 use ieee.std_logic_1164.all;
3 use ieee.std_logic_arith.all;
4 use ieee.numeric_std.all;
5 ...
6 signal src, dest: std_logic_vector(15 downto 0);
7 signal amount: std_logic_vector(3 downto 0);
8 ...
9 dest <= src sll amount;
```

---
